Angel Ortiz

Web Developer, Frontend Developer

(408) 903-3325 | angelortizsanchez383@gmail.com |San Jose, CA | https://www.linkedin.com/in/angel-ortiz-sanchez/ | https://github.com/XAngeloidX |

TECHNICAL SKILLS

Proficient: *Node, Javascript, React / CSS / HTML*
Knowledgeable: *PostMate / VSCode / BootStrap / PostgreSQL*
Some Experience: *Python*

TECHNICAL PROJECTS

Web Watchers | Co-Developer among 3 peers | September-October/2023 | Link to the project
- We used our full learning to solve our problems using the full extent of CRUD operations and BackEnd Databases, as well as the new format of linking all routes together to make a cohesive one page website by binding them to a base root page to then tie into the html page in the front.
- How the backend was solved was by making each individual api function have specific tasks that would be called in different endpoints to pull/post/delete/patch what is required and modifying the data in the back.
- The Front end was done by using more React-DOM components such as outlet to have the child elements display onto the parent being the main webpage and the styling was kept simple to keep it clean and readable.
- React JS was the focal point of the project using it to dynamically change the website and keeping a more cleanly built inner working while being styled with bootstrap css, all of this being complemented by backend use of SQL to build data tables to house elements to be called and saved when creating or posting on the website.

Puppy Bowl Demo | Solo Developer | August/2023 | Link to the project
- This was my first major foray into React JS and learning the full fundamentals in applying it to a website and the problem I had to deal with was supplementing all the html, css, and js into React JS files themselves for a more dynamic website creation.
- How this was overcome was by learning more about the inner workings of JavaScript and pairing that with new node.js components that can add bonus functionality to a .jsx page and make it flow cleaner.
- This enabled me to learn more on JS and Node itself by using new import components to add interactivity to the user page which allowed me to dive further into each component which would help me in later projects.

EXPERIENCE

Electronic BoxBuild, Storage | Omega EMS | San Jose, CA
October/2018 - October/2023

- **Constructed** devices at a faster pace than set by my employer enabling them to have other workers hands free for more projects and this was when I was assigned to HIVE.
- **Adaptable** while quickly gaining familiarity in a new work/assignment and able to produce intended results on par with co-workers and quicker once a few are built.
- **Displayed** the ability to work with others at a reasonable pace without breaking a normal workflow ethic and supplying my side of the assignment.
- **Resiliently** completing what is assigned, seeking help and learning what I need from those around me when the need arises.

ARTICLES / PUBLICATIONS

Title: Aesthetics in Modern Web Design
Topic: A post explaining the importance of a clean and usable design for a user and how it reflects on the company.
Link: https://www.crowdbotics.com/blog/aesthetics-in-modern-web-design

Title: Front-end Development Approach Using Modern Front-End Frameworks
Topic: An article speaking about the need to make the front end for the user and valuing their experience.
Link: https://teleporthq.io/blog/front-end-development-approach-using-modern-front-end-frameworks

SUMMARY

I believe I would be a good fit into the development field for the reasons that I can quickly adapt to what is required of me while quickly getting my assignments done while being enthused because of the real-time work I can view in the allotted time and fully able to work with others in assigned roles or in unison. Even if I am new to the development field I am confident in my ability to use what has been learned and ready to apply it and show integrity in my work.

EDUCATION

Fullstack Academy Web Development Bootcamp   May/2023 - November/2023
Software Engineering Certificate
Full-time, Full Stack Javascript Web Development Immersive

DeAnza College   June/2023
Bachelor of Science in Subject - 50 Credits
Relevant Courses: Biochemistry, Biology 6C, Chemistry 6B

VOLUNTEER EXPERIENCE
Sacred Heart Volunteer
- The Summer of 2016 (June - August)
- Helping distribute food to those that needed food at home

PROFESSIONAL AFFILIATIONS

OurCity Forest Volunteer
- This was done during the year of 2017 every weekend for the entire year
- Something we were able to accomplish was successfully raising a few endangered species and cross breeding them, keeping them thriving and growing
